## Introduction

### **! WARNING!**

For safety, operation, and maintenance information, see the Operator's Manual for your product.

Only qualified people are approved to maintain the machine.

### **! WARNING!**

Replace all safety labels that are missing, damaged, or illegible. If a component is replaced and it has a safety label on it, apply a safety label to the new component. If a person operates a machine with missing, damaged, or illegible safety labels it puts them at risk of serious injury or death.

# Label Locations

**IMPORTANT!** If you replace a part that has a safety label on it, you must apply a new safety label. Immediately replace safety labels that are damaged, have been removed, or are illegible.

Contact your local Wallenstein Equipment dealer or distributor to order a safety label kit. Labels are not sold individually.

## Accessories

For price and availability, contact your local Wallenstein dealer or go to [WallensteinEquipment.com](http://WallensteinEquipment.com).

For accessory installation instructions, go to [WallensteinEquipment.com/Support.aspx](http://WallensteinEquipment.com/Support.aspx), and then select **Accessories**.

### Four-way wedge with log stripper W4302

Split logs into four pieces with a single stroke.

### Ladder hitch W4304

Align the hitch with your tow vehicle for the optimum towing height.

### 48" log peavy Z99001

Use a log peavy to move logs and prevent injury to your hands.

### All weather log splitter cover W4204

Heavy duty industrial material, made in Canada. Protects your log splitter from harsh elements.

## Bolt Torque

**IMPORTANT!** If you replace hardware, use fasteners of the same grade.

**IMPORTANT!** The torque specifications in these tables are for non-greased or non-oiled threads. Do not grease or oil fastener threads unless otherwise indicated. When using a thread lock, increase the specified torque 5%.

Bolt grades are identified by the marks on the bolt head.

The bolt torque specification tables provide the correct torque settings for common bolts and capscrews. Tighten all bolts to the torque that is specified in the table, unless otherwise indicated. Check the bolt tightness periodically.

## Hydraulic Fitting Torque

Tighten flare-type tube fittings:

1. Check the flare and flare seat for defects that might cause leaks.
2. Align the tube with the fitting before tightening.
3. Hand-tighten the swivel nut until it is snug.
4. To prevent the tube from twisting, use two wrenches. Place one wrench on the connector body and tighten the swivel nut with the second wrench. Torque the fitting to the correct specification.

If a torque wrench is not available, use the flats from finger tight (FFFT) method.

Hydraulic Fitting Torque Specifications
